The film glued on the face side offers the following advantages:

- according to the ZDB Code of practice "Swimming pool construction", suitable for laying in underwater areas and very wet areas
- full surface contact to the base, as there is no separation layer reducing the adhesion
- thanks to the transparent film, permanent checking of the joints is possible
- after the setting of the thin-bed mortar, the film can be removed without leaving any residue
- long setting times and cleaning operations involving a lot of work are no longer required

Chroma II Mosaics are perfectly suitable for the combination in compatible colours with the "Wiesbaden channel - mosaic recess"
